

Radiotherapy late effects are symptoms that can happen any time from 3 - 6 months to many years after your radiotherapy treatment ended. Or you may find the side effects that you had during treatment never went away.

What help is available?

The Radiotherapy Late Effects Service aims to support people to live well by reducing the impact that late effects are having and improving your quality of life.

How do I get an appointment?

- Your GP or other healthcare professional can refer you to the Late Effects Service by using the hospital systems or the contact details below.
- You can refer yourself if you finished your radiotherapy more than 3 months ago using the details below – please include your name, date of birth and contact details with hospital number if known.
